Notable Skills

JavaScript	SQL	HTTP Request & API
CSS (and SCSS)	Node.js	PLSQL
React.js	jQuery	Git

Expected Salary: HK$22,500

ABOUT ME

From the moment I first approached to coding, I was amazed and hooked into it. Web development offers an engaging challenge to continually learn to create high-quality software solutions. I love the continuous learning journey as it has never failed to excite me with what technology allows us to create.

Below you will find my qualifications, and projects I have completed that showcase my skill in web development.

JOB EXPERIENCES

IT Officer

Enterprise Solutions Office at City University of Hong Kong   June 2022 - Current

➢ Currently, I am working as a full-time IT officer to develop and maintain internal software solutions for CItyU.
➢ Developing a Community Service Record System to assist staffs on managing CEP volunteer records.
➢ Assisting another department of the rollout process of a renewed student course registration system, Banner 9.
➢ My addition to the office has boosted the progress of company projects, and I can constantly handle tasks effectively from two departments.

Web developer

The UXM   Autumn 2021

➢ During the start of my semester, I engaged in a remote part-time position with the UXM to build their UXM music web platform. I was responsible for building React (with Next.js) components with Bootstrap & extracting server information in the front-end. We rebuilt the site into React and my employment ended to catch up with my university curriculum. (Company website: https://music.theuxm.com)

EDUCATION

City University of Hong Kong | Sept 2018 – Jul 2022

Double Major in Information Management & Accountancy | CGPA: 3.17

PROJECT EXPERIENCES | *Details of these projects can be found on my Git Profile*

1) Not Pizza Hut (React replica version of pizza hut) - https://not-pizzahut.netlify.app/

Reference to the official Pizza Hut page, I rebuilt their food ordering portion of the website through React.js. This project simulates order handling from customer and the website is responsive designed.

➢ Built with React.js functional components, along with the usage of React Hooks such as useContext, useReducer and custom Hooks. It also communicates the backend service with fetch API.

2) WhatsNearMe Hong Kong – Nearby Place Finder Web App -   https://yuyuichiu.github.io/WhatsNearMe-HK/

A responsive website to find the nearest facilities to your provided location. Wonder where is the nearest supermarket to you? WhatsNearMe suggests your target facilities near you, so you can easily decide where to go.

➢ Built with HTML, CSS & vanilla JavaScript, utilizes Google Map API & Local Storage functionality.

3) Landing Page for Sun Smart Learning Centre - https://sunsm.art

I built a modern landing page for a local business, including the design and coding. I put my web design on Figma design tool, and translated it into front-end code in React.js, Typescript and CSS Animations.
